What is Meta Tag?

Meta tags, also known as metadata, are snippets of information in the HTML code of a web page. They provide data about the web page itself and help search engines and browsers understand and display the page correctly.

Here are some of the most important meta tags in HTML, along with examples:

Title Tag:

It specifies the title of the web page, which appears in the browser tab.

```
<title>Example Page Title</title>
```

Meta Description Tag:

It provides a brief description of the web page's content. It's often used by search engines.

```
<meta name="description" content="This is a brief description of the page content.">
```

Meta Keywords Tag:

It is used to include relevant keywords for the web page's content.

```
<meta name="keywords" content="keyword1, keyword2, keyword3">
```

Author Tag:

It specifies the author of the web page.

```
<meta name="author" content="Your Name">
```

Viewport Tag (for responsive design):

It helps to control the layout and scaling on different screen sizes, critical for mobile devices.

```
<meta name="viewport" content="width=device-width, initial-scale=1.0">
```
