

5 Amazing JS Snippets

you wouldn't have knew before

Hey Devs !

Here are some
cool useful JS
Snippets that
will surely be
useful to you

swipe →

⚡ Vibrate your Device

- 🔮 You can vibrate any device using Javascript using this snippet. Mention the milliseconds inside the brackets

```
● ● ● Vibrate your Device  
  
// vibrate device for 300 milliseconds  
window.navigator.vibrate(300);
```

Will not work if the device is in silent mode

⚡ Call a function when Enter is pressed

- 🔮 You can trigger a function when enter key is pressed on a textArea when submitting a form or kinda thing

```
Trigger a function when enter is pressed

let textArea = document.getElementById("inputOne");
textArea.addEventListener("keydown", function(e){
  if(e.key === "Enter"){
    validate(e);
  }
});

function validate(e){
  alert('Enter is pressed');
}
```

⚡ Identify OS

🔮 Detect OS of any Desktop/Laptop through browser with this JS snippet

```
Identify Desktop/Laptop OS

var OSName="Minor unknown OS";
if (navigator.appVersion.indexOf("Win")!=-1) OSName="Windows";
if (navigator.appVersion.indexOf("Mac")!=-1) OSName="ios - Apple Inc.";
if (navigator.appVersion.indexOf("X11")!=-1) OSName="UNIX";
if (navigator.appVersion.indexOf("Linux")!=-1) OSName="Linux";

console.log(OSName);
```

⚡ Copy to ClipBoard

🔮 You can copy any targeted string with this simple one-liner

Copy any value to clipBoard using JS

```
function copyToCb(){  
    navigator.clipboard.writeText(targetText);  
}
```

Identify whether DarkMode is on or off

You can easily identify whether the user has enabled dark mode on or off by using this snippet below

```
Identify whether Dark mode has been enabled or disabled

if (window.matchMedia && window.matchMedia('(prefers-color-scheme: dark)').matches){
  console.log('Dark Mode');
}else{
  console.log('Light Mode');
}
```
